## SUMMARY

---

Full-stack engineer with hands-on ownership across system design, frontend and backend development, cloud deployment, and post-launch support. Built and maintain production systems in enterprise finance, workforce operations, and medical software, including an AI-integrated P&L platform used by 4 internal departments and 3 external companies, and a workforce app live across 5 retail stores in Sydney with 128 active users. Strong at turning real operational workflows into reliable software and working directly with stakeholders in Korean, Japanese, and English.

## CORE COMPETENCIES

---

- Full-Stack Product Delivery
- React / TypeScript Frontend Development
- Backend API Design and Data Modeling
- Cloud Deployment on GCP / Firebase
- Authentication, RBAC, and Admin Workflows
- AI / LLM Integration in Production
- Workflow Automation and Internal Tools
- Cross-Functional Stakeholder Communication
- Trilingual Client and Team Collaboration

## EXPERIENCE

---

### Software Engineer

TEN-X Co., Ltd. | Tokyo, Japan (Remote from Sydney) | Oct 2024 - Present

- Built SAIXAN, an AI-integrated departmental P&L platform now used by 4 internal departments and 3 external companies, giving management real-time visibility into profit and loss across teams.
- Owned the full delivery lifecycle as the sole engineer, including system design, data modelling, API development, React frontend implementation, cloud deployment on GCP / Firebase, and ongoing production support.
- Developed role-based workflows for expense claims, approvals, budget vs actual tracking, and reporting, replacing manual and paper-based finance operations with a structured digital workflow.
- Integrated OpenAI-powered bilingual financial querying and analysis in English and Japanese, including prompt design, context handling, and structured output processing for production use.
- Contributed to Microsoft Dynamics 365 CRM delivery and helped shape AI-focused engineering practices, including reusable prompt workflows and development standards.

### Full-Stack Developer (Freelance)

JUNCAFE OPERA PTY LTD | Sydney, Australia | Jan 2025 - Present

- Identified recurring payroll and attendance errors in a café operation, traced them to hardware-based time cards and manual wage calculation, and proposed a web-based solution better suited to the business workflow.
- Designed, built, and deployed Bee-Time as a mobile-first workforce management web app, owning product design, frontend, backend, data modelling, and production rollout.
- Replaced physical cards and rental hardware with QR-based attendance tracking, enabling staff to log work and breaks on mobile and view actual worked hours in real time.

- Improved wage accuracy and admin efficiency across 5 cafés and restaurants by giving the owner store-level and employee-level attendance visibility, while reducing hardware and card-related operating costs.

---

## Software Engineer

*Genoray Flexlab | Seoul, South Korea | Jul 2022 - Jul 2023*

- Built and enhanced a medical imaging SDK in C++ and C#, expanding DICOM converter compatibility from 3 to 10+ manufacturers while preserving patient data integrity across PACS integrations.
- Worked across ETL pipelines involving SQLite, PostgreSQL, MySQL, and proprietary data formats to improve interoperability between external imaging devices and the company's viewer system.
- Improved processing reliability through batch workflows, stronger validation, and better error handling, contributing to a 25% increase in product sales.
- Communicated directly with Japanese clients in technical discussions, reducing feedback overhead, shortening turnaround time, and improving delivery accuracy without relying on a non-technical intermediary.

---

## Operations & Business Development Associate

*Kagoshima Airport Building Co., Ltd. | Kagoshima, Japan | Apr 2017 - Dec 2021*

- Worked across airline sales, tenant billing, passenger operations, and stakeholder coordination in a high-volume airport environment with complex day-to-day workflows.
- Managed multilingual communication in Japanese, Korean, and English across internal teams, airlines, and external partners, strengthening cross-functional coordination and operational accuracy.
- Supported billing and facility-related operations for airline and cargo tenants, building a strong understanding of real business processes later carried into software delivery.
- Coordinated the launch of a web page for a newly opened business jet terminal, which sparked an early interest in building user-facing digital systems.

---

## EDUCATION

### Master of Information Technology (Enterprise Software Development)

*University of Technology Sydney (UTS) | Feb 2024 - Feb 2026*

Dean's List 2025, Faculty of Engineering and Information Technology

### Bachelor of Japanese Language and Literature / Bachelor of International Trade

*Jeonbuk National University | Mar 2012 - Feb 2017*

---

## SKILLS

**Languages:** TypeScript, JavaScript (ES6+), Python, C#, C++

**Frontend:** React, Next.js, Tailwind CSS, HTML5, CSS3

**Backend:** Node.js, Express, Firebase Cloud Functions, Prisma ORM, REST APIs

**AI / LLM:** OpenAI API, LLM Integration, Prompt Design, Structured Output Handling

**Databases:** PostgreSQL, MySQL, Firestore, SQLite

**Cloud & DevOps:** GCP (Cloud Run, Cloud Functions), Firebase, AWS, Vercel, Docker, GitHub Actions, CI/CD

**Authentication & Security:** JWT, Google OAuth 2.0, Firebase Auth, RBAC

**Tools:** Git, GitHub, Figma, Postman, VS Code

**Languages Spoken:** Korean (Native), Japanese (Business), English (Professional)
